Recommendations / Growing guidelines

- No PGR required.
- Provide minimum temperature (18°C) in spring to secure fast growing. When buds start to form, temperature can be lowered to 15-16°C.
- Light / Day length: Long days with 14-16 h of light promote both, vegetative growth and flower induction. Tuberous Begonia is a long-day plant with a critical day length of 12 h.
- PGR: Only fast-growing varieties require PGR application. Start 4 weeks after potting at a rate of 80 ml per 100 lt.
