Propagation Key Tips

Apply paclobutrazol sprenc at sowing or at radicle emergence (72 hours from sowing) to control hypocotyl stretch. In Stage 2/start of Stage 3, young plants can be grown cooler to tone the plug and shorten the internodes (night temperatures 54°F/12°C), but will add a week to crop time.

Common Problems

Insects: Aphids, Thrips, Whiteflies, Japanese Beetles Diseases: Fusarium, Pythium, Thielaviopsis Leaves can redden in cold temperatures.

Finishing Key Tips

Cuphea is very vigorous and temperature sensitive. Growing cool can reduce PGR needs. Conversely, growing above 73°F (23°C) may need higher PGR rates or additional applications. Adjust based on your conditions. No pinch needed; if you choose to pinch in young plant stage, follow with 2 to 3 treatments of paclobutrazol spray at 20 ppm. Cuphea is sensitive to ethylene, so take proper precautions when shipping.
