

# Scabiosa caucasica Fama® White

Item no.: V1980/C

## Height

55cm

## Exposure

Sun - Partial shade

## Seed form

Raw Seed, Coated Seed

## Uses

Bedding, Cutflower

## Culture guide

### Usage

Cut flower, pots, container and landscape perennial; attracts bees and butterflies

### Sowing method

1-2 seeds per plug

### Germination

Stage 1 (10-18 days)

### Growing on

Transplant plugs after 6-7 weeks. Maintain temperatures of 60-65 °F (15-18 °C). Lower temperatures cause premature flowering and poor garden performance. Fertilize at 150-200 ppm nitrogen. For cut flower production, space Fama at 16 x 20" (40 x 50 cm) between plants.

Cuts can be harvested for 3 consecutive years. Cut at bud stage or half-open stage.

## **Media**

Use a well-drained, growing substrate, 1,5-3 kg/m<sup>3</sup> complete balanced fertilizer, 0-2 kg/m<sup>3</sup> slow release fertilizer (3-9 months), iron-chelate, micronutrients, pH 5.8-6.5. Field: loamy sandy to sandy humus soils with good drainage and good nutrition levels. Standard fertilization: 80-100 g/m<sup>2</sup> of a slow release fertilizer.

## **Temperature**

Grow at 12-15 °C or outdoors. Overwinter indoors frost free at 3-5 °C.

---

Stage I Starts with the radicle breaking through the testa. The roots are touching the medium. Ends with fully developed cotyledons.

Stage II Starts from fully developed cotyledons. Ends with the fully developed true leaf or true leaf pair.

Stage III Starts from the fully developed true leaf or true leaf pair and ends with 80% of the young plants being marketable.

Stage IV All young plants are ready for sale and in the process of being hardened off. This stage lasts about 7 days.

The cultural recommendations are based on results from trials conducted under Central European conditions. Different conditions in other parts of the world may lead to deviations in results achieved.
